Checking the firmware version

1. Power on the DN-700R.
2. Press “MENU” key and select “09 Utility” by the knob.
3. Press the knob and select “04 Firmware Version” by the knob.
4. The installed firmware version is displayed.

How to install firmware

Prepare update file

1. Prepare the update file for DN-700R named the "DN700RFW.BIN".
2. Prepare a USB thumb device and place the update file on its root directory.

Update procedure

3. Confirm the DN-700R is in standby mode. If not so, turn the unit power off.
4. Put the USB thumb device on the unit.
5. Turn the unit power on and wait for ready.
6. You will find the update confirming message on the main screen of the unit. Updater version is included in the message. Confirm the version is correct. In the message, "Cancel" is selected as default.
7. Turn the JOG wheel on the front panel to select "OK". If you correctly select "OK", black cursor will move on the string "OK". Press the JOG wheel to start updating.
8. Wait for 1 minute approximately. In updating the screen of the unit may black out.
9. After updating the unit will re-boot up automatically.
10. Confirm the firmware version by following steps.
 - 10.1. Press the STOP button to go to STOP mode.
 - 10.2. Press the MENU button and select "09 Utility". Then press the JOG wheel to enter.
 - 10.3. Select "04 Firmware Version" and press the JOG wheel to enter. You can see the version.

CAUTION:

Please DO NOT touch and DO NOT disconnect power while the unit is being updated.

Before you update the unit, make sure that the power cable is firmly plugged into the DN-700R and into an AC outlet. If the power is turned off accidentally while the unit is being updated, the DN-700R may not start up.
